

Teton Village Association ISD Resolution

A RESOLUTION STRONGLY RECOMMENDING INDIVIDUALS WEAR FACE COVERINGS IN PUBLIC PLACES

WHEREAS, COVID-19 was first detected in Wuhan, China in 2019, and since then has spread to over 216 countries including the United States. There are 1,445 lab confirmed cases of COVID-19 in Wyoming as of July 9, 2020, and 118 lab confirmed cases of COVID-19 in Teton County as of July 9, 2020, as well as the presence of community spread in Wyoming and Teton County. It is expected that more cases will be diagnosed; and

WHEREAS, the World Health Organization declared COVID-19 a worldwide pandemic as of March 11, 2020; and

WHEREAS, on March 13, 2020, the President of the United States declared a national emergency concerning the coronavirus, specifically stating that, in “December 2019 a novel (new) coronavirus known as SARS-Co V-2 was first detected in Wuhan, Hubei Province, People’s Republic of China, causing outbreaks of the coronavirus disease (COVID-19) that has now spread globally [...] The spread of COVID-19 within our Nation’s communities threatens to strain our Nation’s healthcare systems [...] Additional measures [...] are needed to successfully contain and combat the virus in the United States”; and

WHEREAS, on March 13, 2020, Wyoming Governor Mark Gordon declared a State of Emergency and Public Health Emergency in the State of Wyoming, stating that on March 11, 2020, an individual within the State of Wyoming tested presumptive positive for COVID-19; and

WHEREAS, a significant number of Wyoming citizens are at risk of serious health complications, including death, from COVID-19. Although most individuals who contract COVID-19 do not become seriously ill, people with mild symptoms, and even asymptomatic persons with COVID-19, place other vulnerable members of the public at significant risk; and

WHEREAS, a large number of persons with serious infections can compromise the ability of the healthcare system in Teton County to deliver the necessary healthcare to the public; and

WHEREAS, Jackson Hole, Wyoming is a tourist destination and tourism-dependent communities are especially vulnerable to the spread of COVID-19; and,

WHEREAS, and there is an urgent need to safely reopen, remain open, rebuild tourism, and generate sales and lodging taxes; and,

WHEREAS, as previous public health orders expire or are replaced with less restrictive orders, Teton County will likely see increasing numbers of visitors from outside the county who can potentially transmit COVID-19 and at the same time will be more likely to interact with each

other and with local residents as businesses, tourist destinations such as National Parks, and other services reopen; and

WHEREAS, COVID-19 is a respiratory illness, transmitted through person-to-person contact or by contact with surfaces contaminated with the virus. Persons infected with COVID-19 may become symptomatic two to fourteen days after exposure; and

WHEREAS, respiratory droplets from infected individuals are a major mode of SARS-CoV-2 transmission. This understanding is the basis of the recommendations for physical distancing, and of the PPE guidance for healthcare workers. Droplets do not only come from coughing or sneezing: in a-/pre-symptomatic individuals, droplets are generated via talking and breathing; and

WHEREAS, face coverings reduce droplet dispersal. Cloth-based coverings reduce emission of particles by variable amounts, for example one study showed that they are almost completely eliminated. Patients with seasonal coronaviruses (other than SARS-CoV-2) were randomized to exhale breath with or without surgical face masks on. Viral RNA was detected in 40% of aerosols and 30% of respiratory droplets collected from participants without a face mask — but in none collected from those wearing a mask. A second study showed that cloth coverings filtered viral particles during coughing at about 50 to 100% of the filtration efficiency of surgical masks, depending on fabric, with absolute filtration efficiencies of 50-70%. A third study showed 50% filtering efficiency for airborne particles; and

WHEREAS, evidence indicates that face covering wearing reduces the transmissibility per contact by reducing transmission of infected droplets in both laboratory and clinical contexts. Public face covering wearing is most effective at stopping the spread of the virus when compliance is high. This evidence supports the conclusion that more widespread face covering adoption can help to control the COVID-19 epidemic by reducing the shedding of droplets into the environment from asymptomatic individuals. This is also consistent with the experiences of other countries that have adopted this strategy; and

WHEREAS, in the most comprehensive, systematic review and meta-analysis of face coverings published to date, Chu et al. found that face masks could reduce risk of transmission of COVID-19 by an expected 85 percent; and

WHEREAS, guidelines published by the U.S. Centers for Disease Control (CDC) on April 3, 2020, recommend that all people wear cloth face coverings in public settings where other physical distancing measures may be difficult to maintain. CDC also advises the use of simple cloth face coverings to slow the spread of the virus and help people who may have the virus and do not know it from transmitting it to others; and

WHEREAS, orders requiring face coverings in total or in part are already in place state-wide in many U.S. states and local areas in other U.S. states; and

WHEREAS, decreased transmissibility due to face covering use could substantially reduce the death toll and economic impact while the cost of the intervention is low; and

NOW THEREFORE BE IT RESOLVED BY THE BOARD OF DIRECTORS OF TETON VILLAGE ASSOCIATION IMPROVEMENT & SERVICE DISTRICT, TETON VILLAGE, WYOMING, having duly met on July 10, 2020, at a Special Board Meeting, which was properly noticed and open to the public, and having fully considered the matter at hand, that:

1. A requirement that individuals wear a face covering, combined with practicing social distancing and washing hands often, protects the public, including residents, visitors and guests of the community, to the highest degree possible; and
2. A requirement that individuals wear a face covering will slow the spread of COVID-19 in the community and ensure the ability of the healthcare system in Teton County to deliver necessary healthcare to the public; and
3. A requirement that individuals wear a face covering will protect the long-term economic health of the community by slowing the spread of COVID-19, ensuring the best possible opportunity for our local businesses to continue welcoming and serving tourists and visitors to Teton Village and our region throughout the summer and fall months; and
4. The Teton Village Association ISD Board of Directors strongly recommend all individuals wear face coverings in Teton Village; and recommend all businesses require masks to be worn indoors to reduce the transmission of COVID-19; and
5. The Teton Village Association ISD Board of Directors supports the Teton County Health Department and Dr. Travis Riddell, MD, MPH, the Teton District Health Officer, with regard to the public health order(s) currently in effect and their efforts to enact order(s) requiring the wearing of face coverings in public, including any exceptions they deem necessary, and strongly urge compliance therewith.

PASSED, APPROVED, AND ADOPTED this 10th day of July 2020.

TETON VILLAGE ASSOCIATION
IMPROVEMENT AND SERVICE DISTRICT

Ed Gannon, Chairman

Jim Terry, Treasurer

Mary Kate Buckley, Secretary
